BIOENGINEERING (BIOENGR)

BIOENGR 215 Laboratory Rotation (1-8 Units) Fall, Winter, Spring, Summer
Instructor(s): Staff
Prerequisite(s): Consent of instructor and Bioengineering Graduate Advisor.
Restrictions: Graduate students in Bioengineering.
Activities: Lecture, Seminar, Clinical, Fieldwork, Independent Study, Project, Web work, Workshop, Practical Experience, Special Projects
Laboratory research rotations are to allow students to become familiar with different areas of research, learn new experimental techniques, obtain experiences in unique research laboratories, and ultimately to identify a lab in which to conduct dissertation research. Rotation projects should involve hands-on research and be a piece of work that the student can present at the end of the rotation.

School: Graduate Division
Department: Bioengineering Program
May the student choose the instructor for this course? Yes
Does enrollment in this course require instructor approval? Yes
Course Grading Convention: P/NP (Pass/Not Pass) or S/U (Satisfactory/Unsatisfactory)
Graduate Division course: Yes
Is this a web-based online course? No
Is this an Interprofessional Education (IPE) course? No
May students in the Graduate Division (i.e. pursuing Master or PhD) enroll in this course? Yes
Repeat course for credit? Yes

BIOENGR 221 Tissue Mechanobiology (2.5-3 Units) Winter
Instructor(s): Jeffrey C. Lotz, Tamara N. Alliston, Valerie M. Weaver
Restrictions: None
Activities: Lecture, Seminar, Clinical, Fieldwork, Independent Study, Project, Web work, Workshop, Practical Experience, Special Projects

A central role for many tissues is to support physical forces (tension, compression, shear, pressure). This course will introduce the mechanisms by which cells respond to load; how these mechanisms are relevant to normal function & disease etiology; progression; prevention & treatment; an overview of tissue mechanics (relationships between force, stress/strain), mechanisms of cell/matrix interactions, examples of tissue modeling & remodeling in response to physical stimuli.

School: Graduate Division
Department: Bioengineering Program
May the student choose the instructor for this course? No
Does enrollment in this course require instructor approval? No
Course Grading Convention: Letter Grade, P/NP (Pass/Not Pass) or S/U (Satisfactory/Unsatisfactory)
Graduate Division course: Yes
Is this a web-based online course? Yes
Is this an Interprofessional Education (IPE) course? No
May students in the Graduate Division (i.e. pursuing Master or PhD) enroll in this course? Yes

BIOENGR 225 Mechanistic Modeling and Simulating of Biological Systems (2-4 Units) Spring
Instructor(s): C. Anthony Hunt
Prerequisite(s): Consent of instructor; Maturity in mathematics; some programming experience
Restrictions: none
Activities: Lecture, Seminar, Clinical, Fieldwork, Independent Study, Project, Web work, Workshop, Practical Experience, Special Projects
Mechanism based, computational methods for modeling & simulating living systems (cells, tissues, etc.) and their use in new therapeutic development will be contrasted with established methods. Given a problem or objective, students will learn to identify model uses, develop specifications, and then select implementations enabling developing, constructing, validating, and iteratively revising multi-attribute, hierarchical, biomimetic analogues of pharmacologically responsive biological systems.

May students in the Graduate Division (i.e. pursuing Master or PhD) enroll in this course? Yes

BIOENGR 240 Principles of Magnetic Resonance Imaging (4 Units) Fall
Instructor(s): Peder E Larson
Prerequisite(s): None
Restrictions: Not open to students who have passed BIOMED IMG 201.
If not enrolled in Master’s of Science in Biomedical Imaging (MSBI) program then students must obtain instructor approval.
Activities: Lecture, Seminar, Clinical, Fieldwork, Independent Study, Project, Web work, Workshop, Practical Experience, Special Projects, Lab skills, Lab science, Conference, Discussion
This introductory course aims to teach the basic principles behind magnetic resonance imaging (MRI). It will cover the physical principles of magnetic resonance, image formation, and image reconstruction, MRI hardware, contrast generation, and common artifacts. Cross-listed with BIOMED IMG 201.

School: Graduate Division
Department: Bioengineering Program
May the student choose the instructor for this course? Yes
Does enrollment in this course require instructor approval? Yes
Course Grading Convention: Letter Grade
Graduate Division course: Yes
Is this a web-based online course? No
Is this an Interprofessional Education (IPE) course? No
May students in the Graduate Division (i.e. pursuing Master or PhD) enroll in this course? Yes

BIOENGR 255 Advanced Tissue Engineering (2-4 Units) Fall
Instructor(s): Peter M. Atala
Prerequisite(s): Consent of instructor
Restrictions: none
Activities: Lecture, Seminar, Clinical, Fieldwork, Independent Study, Project, Web work, Workshop, Practical Experience, Special Projects
Advanced tissue engineering is the practice of developing, constructing, validating, and iteratively revising multi-attribute, hierarchical, biomimetic analogues of pharmacologically responsive biological systems. This course will introduce the mechanisms by which cells respond to load; how these mechanisms are relevant to normal function & disease etiology; progression; prevention & treatment; an overview of tissue mechanics (relationships between force, stress/strain), mechanisms of cell/matrix interactions, examples of tissue modeling & remodeling in response to physical stimuli.

**BIOENGR 241 Metabolism and Magnetic Resonance Spectroscopy (3 Units)** Winter

*Instructor(s):* John Kurhanewicz  
*Prerequisite(s):* Bioengineering 240 or Biomedical Imaging 201

Restrictions: none

Activities: Lecture, Seminar, Clinical, Fieldwork, Independent Study, Project, Web work, Workshop, Practical Experience, Special Projects, Lab skills, Lab science, Conference, Discussion

This course is designed to follow Bioengineering 240 or Biomedical Imaging 201, Magnetic Resonance Imaging. It will build on the fundamental aspects of magnetic resonance physics presented in the first course, but will focus on MR spectroscopy which provides metabolic and biochemical information. The course will cover basic theory, underlying biochemistry and physiology, techniques for acquiring and processing MR spectroscopic data, and biomedical applications for this emerging medical modality.

**BIOENGR 242 Principles of Tissue Engineering (2 Units)** Spring

*Instructor(s):* Tejal A Desai  
*Prerequisite(s):* Consent of instructor.

Restrictions: none

Activities: Lecture, Seminar, Clinical, Fieldwork, Independent Study, Project, Web work, Workshop, Practical Experience, Special Projects, Lab skills, Lab science, Conference, Discussion

Introduction to the principles of tissue engineering. Engineered matrices should emulate the physiological environment of cells. Analysis of biochemical, physico-chemical and biomechanical environment of cells; the role of cellular biomechanics in tissue engineering; biomaterials and biocompatibility; synthetic scaffolds; biosurface engineering; engineered tissues and organs.

**BIOENGR 245 Machine Learning Algorithms for Medical Imaging (3-4 Units)** Spring

*Instructor(s):* Srikantan S. Nagarajan, Valentina Pedroia  
*Prerequisite(s):* Calculus, linear algebra, undergraduate physics (electromagnetism), or consent of instructor.

Restrictions: None

Activities: Lecture, Seminar, Clinical, Fieldwork, Independent Study, Project, Web work, Workshop, Practical Experience, Special Projects, Lab skills, Lab science, Conference, Discussion

The goal of this course is for students to understand various machine learning algorithms that are used in brain imaging, and to gain hands-on experience using them in student projects, homework, and student-driven class-presentations. Common machine learning algorithms used for MRI, fMRI, EEG, MEG, and ECOG, will be the focus of the course.

**School:** Graduate Division

**BIOENGR 249 Group Studies (1-8 Units)** Fall, Winter, Spring

*Instructor(s):* Staff  
*Prerequisite(s):* Graduate standing

Restrictions: None

Activities: Lecture, Seminar, Clinical, Fieldwork, Independent Study, Project, Web work, Workshop, Practical Experience, Special Projects, Lab skills, Lab science, Conference, Discussion

Advanced study in various subjects through seminars on topics to be selected each year, informal group studies of special problems, group participation in comprehensive design problems, or group research on complete problems for analysis and experimentation.

**School:** Graduate Division  
**Department:** Bioengineering Program  
**May the student choose the instructor for this course?** Yes

BIOENGR 250 Research (1-8 Units) Fall, Winter, Spring, Summer
Instructor(s): Staff
Prerequisite(s): Graduate standing
Restrictions: none
Activities: Lecture, Seminar, Clinical, Fieldwork, Independent Study, Project, Web work, Workshop, Practical Experience, Special Projects

In this course, students will work together with a primary research advisor to select a research question and design a project plan that will be carried out by the student. Through this experience, the student will gain experience in research strategy and execution, as well as experimental techniques and analysis and interpretation of results. At the conclusion of this course, the student will present on their progress.

BIOENGR 260 Translational Challenges in Medicine (1 Units) Fall
Instructor(s): Marc A. Shuman
Prerequisite(s): none
Restrictions: none
Activities: Lecture, Seminar, Clinical, Fieldwork, Independent Study, Project, Web work, Workshop, Practical Experience, Special Projects, Lab skills, Lab science, Conference, Discussion

This course focuses on solutions to challenges in the diagnosis and treatment of diseases of the eye, hereditary disorders and cancer. Lecturers with diverse skills discuss their experience in navigating this process. They have successfully solved challenges in their fields that led to commercialization. They will cover technical and scientific limitations and opportunities for advances with inventions in biomarker development and technology for delivery of new types of treatment.

BIOENGR 270 Translational Challenges: Diagnostics, Devices &Therapeutics (2 Units) Winter
Instructor(s): Shuvo Roy
Restrictions: None
Activities: Lecture, Seminar, Clinical, Fieldwork, Independent Study, Project, Web work, Workshop, Practical Experience, Special Projects

This course covers a broad range of topics in the development and operation of medical diagnostics, devices, and therapeutics and combines lectures, readings, case studies, and class discussion. It will feature regular UCSF faculty as well as industry professionals.

BIOENGR 281 Biological Aspects of Bioengineering (1 Units) Fall
Instructor(s): Adam R. Abate
Prerequisite(s): None.
Restrictions: Graduate standing.
Activities: Lecture, Seminar, Clinical, Fieldwork, Independent Study, Project, Web work, Workshop, Practical Experience, Special Projects, Lab skills, Lab science, Conference, Discussion

The objective of this course is to introduce students to the broad range of bioengineering research that is associated with biological applications. Students will be exposed to problems in cellular and molecular engineering, tissue engineering and modeling neural and complex systems. Each session will involve presentations from invited faculty members of specific areas of research.

BIOENGR 282 Special Topics (2 Units) Spring
Instructor(s): Shuvo Roy
Prerequisite(s): Enrollment in MTM Graduate Program.

Restrictions: Course is restricted to MTM Graduate Students.

Activities: Lecture, Seminar, Clinical, Fieldwork, Independent Study, Project, Web work, Workshop, Practical Experience, Special Projects

This course introduces students to the strategies applied to clinical study design for a variety of medical technologies. The main elements of a clinical protocol such as objectives, study design, patient population, sample size and endpoints will be taught in context of company value creation and risk reduction. The course will be taught by industry experts who will use examples from their professional experience.

BIOENGR 283 Designing Clinical Research for Industry (2 Units) Spring
Instructor(s): Shuvo Roy
Prerequisite(s): Graduate standing

Restrictions: Instructor approval required.

Activities: Lecture, Seminar, Clinical, Fieldwork, Independent Study, Project, Web work, Workshop, Practical Experience, Special Projects

Introduces students to the strategies applied to clinical study design for a variety of medical technologies. Main elements of a clinical protocol such as objectives, study design, patient population, sample size and endpoints will be taught in context of company value creation and risk reduction. Students will receive an overview on the regulatory requirements associated with conducting clinical trials for medical technologies. Course will be taught by industry experts.

BIOENGR 285 Health Care Finance & Economics (2 Units) Fall
Instructor(s): Joanne E. Spetz
Prerequisite(s): None

Restrictions: None.

Activities: Lecture, Seminar, Clinical, Fieldwork, Independent Study, Project, Web work, Workshop, Practical Experience, Special Projects

This course focuses on how current health care financing systems and emerging trends affect strategic technology development and market decisions. This course is designed so students understand the underlying drivers of rising health spending, the policies that might slow it, and the impact of possible policies on future product markets. The course covers the fundamental components of health economics, financial analysis, and strategies to increase health care value.

BIOENGR 296 MTM Capstone Project (UCSF) (3 Units) Fall, Winter, Spring
Instructor(s): Shuvo Roy
Prerequisite(s): None

Restrictions: This course is restricted to MTM program students.

Activities: Lecture, Seminar, Clinical, Fieldwork, Independent Study, Project, Web work, Workshop, Practical Experience, Special Projects, Lab skills, Lab science, Conference, Discussion

The objective of the MTM program is to develop leaders who can synthesize the technical, economic, and social issues involved in the design and operation of complex medical devices, systems, and organizations. Students will develop and demonstrate these skills through the capstone project and course activities. This course combines classroom instruction with outside project work. In addition to lecture, teams meet with outside mentors and develop project.
