BIOENGR 225 Mechanistic Modeling and Simulating of Biological Systems (2-4 Units) Spring

Instructor(s): C. Anthony Hunt
Prerequisite(s): Consent of instructor; Maturity in mathematics; some programming experience

Restrictions: none

Activities: Independent Study, Project

Mechanism based, computational methods for modeling & simulating living systems (cells, tissues, etc.) and their use in new therapeutic development will be contrasted with established methods. Given a problem or objective, students will learn to identify model uses, develop specifications, and then select implementations enabling developing, constructing, validating, and iteratively revising multi-attribute, hierarchical, biomimetic analogues of pharmacologically responsive biological systems.

School: Graduate Division
Department: Bioengineering Program

May the student choose the instructor for this course? Yes
Does enrollment in this course require instructor approval? Yes
Course Grading Convention: Letter Grade, P/NP (Pass/Not Pass) or S/U (Satisfactory/Unsatisfactory)
Graduate Division course: Yes
Is this a web-based online course? No
Is this an Interprofessional Education (IPE) course? No
May students in the Graduate Division (i.e. pursuing Master or PhD) enroll in this course? Yes
Repeat course for credit? No

Bioengineering (BIOENGR)
BIOENGR 241  Metabolism and Magnetic Resonance Spectroscopy (3 Units) Winter

Instructor(s): John Kurhanewicz
Prerequisite(s): Bioengineering 240 or Biomedical Imaging 201

Restrictions: none

Activities: Lecture, Lab science

This course is designed to follow Bioengineering 240 or Biomedical Imaging 201, Magnetic Resonance Imaging. It will build on the fundamental aspects of magnetic resonance physics presented in the first course, but will focus on MR spectroscopy which provides metabolic and biochemical information. The course will cover basic theory, underlying biochemistry and physiology, techniques for acquiring and processing MR spectroscopic data, and biomedical applications for this emerging medical modality.

School: Graduate Division
Department: Bioengineering Program
May the student choose the instructor for this course? No
Does enrollment in this course require instructor approval? No
Course Grading Convention: Letter Grade
Graduate Division course: Yes
Is this a web-based online course? No
Is this an Interprofessional Education (IPE) course? No
May students in the Graduate Division (i.e. pursuing Master or PhD) enroll in this course? Yes
Repeat course for credit? No

BIOENGR 242  Principles of Tissue Engineering (2 Units) Spring

Instructor(s): Tejal A Desai
Prerequisite(s): Consent of instructor.

Restrictions: none

Activities: Lecture

Introduction to the principles of tissue engineering. Engineered matrices should emulate the physiological environment of cells. Analysis of biochemical, physico-chemical and biomechanical environment of cells; the role of cellular biomechanics in tissue engineering; biomaterials and biocompatibility; synthetic scaffolds; biosurface engineering; engineered tissues and organs.

School: Graduate Division
Department: Bioengineering Program
May the student choose the instructor for this course? No
Does enrollment in this course require instructor approval? No
Course Grading Convention: Letter Grade
Graduate Division course: Yes
Is this a web-based online course? No
Is this an Interprofessional Education (IPE) course? No
May students in the Graduate Division (i.e. pursuing Master or PhD) enroll in this course? Yes
Repeat course for credit? No

BIOENGR 245  Machine Learning Algorithms for Medical Imaging (3-4 Units) Spring

Instructor(s): Srikantan S. Nagarajan, Valentina Pedroia
Prerequisite(s): Calculus, linear algebra, undergraduate physics (electromagnetism), or consent of instructor.

Restrictions: None.

Activities: Lecture, Seminar, Project, Discussion

The goal of this course is for students to understand various machine learning algorithms that are used in brain imaging, and to gain hands-on experience using them in student projects, homework, and student-driven class-presentations. Common machine learning algorithms used for MRI, fMRI, EEG, MEG, and ECOG, will be the focus of the course.

School: Graduate Division

May the student choose the instructor for this course? No
Does enrollment in this course require instructor approval? No
Course Grading Convention: Letter Grade
Graduate Division course: Yes
Is this a web-based online course? No
Is this an Interprofessional Education (IPE) course? No
May students in the Graduate Division (i.e. pursuing Master or PhD) enroll in this course? Yes
Repeat course for credit? No

BIOENGR 249  Group Studies (1-8 Units) Fall, Winter, Spring

Instructor(s): Staff
Prerequisite(s): Graduate standing

Restrictions: None

Activities: Seminar, Project

Advanced study in various subjects through seminars on topics to be selected each year, informal group studies of special problems, group participation in comprehensive design problems, or group research on complete problems for analysis and experimentation.

School: Graduate Division
Department: Bioengineering Program
May the student choose the instructor for this course? Yes
Does enrollment in this course require instructor approval? No
Course Grading Convention: Letter Grade, P/NP (Pass/Not Pass) or S/U (Satisfactory/ Unsatisfactory)
Graduate Division course: Yes
Is this a web-based online course? No
Is this an Interprofessional Education (IPE) course? No
May students in the Graduate Division (i.e. pursuing Master or PhD) enroll in this course? Yes
Repeat course for credit? No
BIOENGR 250 Research (1-8 Units) Fall, Winter, Spring, Summer

Instructor(s): Staff
Prerequisite(s): Graduate standing

Restrictions: none

Activities: Laboratory

In this course, students will work together with a primary research advisor to select a research question and design a project plan that will be carried out by the student. Through this experience, the student will gain experience in research strategy and execution, as well as experimental techniques and analysis and interpretation of results. At the conclusion of this course, the student will present on their progress.

Repeat course for credit? Yes

BIOENGR 260 Translational Challenges in Medicine (1 Units) Fall

Instructor(s): Marc A. Shuman
Prerequisite(s): none

Restrictions: none

Activities: Lecture

This course focuses on solutions to challenges in the diagnosis and treatment of diseases of the eye, hereditary disorders and cancer. Lecturers with diverse skills discuss their experience in navigating this process. They have successfully solved challenges in their fields that led to commercialization. They will cover technical and scientific limitations and opportunities for advances with inventions in biomarker development and technology for delivery of new types of treatment.

May students in the Graduate Division (i.e. pursuing Master or PhD) enroll in this course? Yes
Repeat course for credit? No

BIOENGR 270 Translational Challenges: Diagnostics, Devices &Therapeutics (2 Units) Winter

Instructor(s): Shuvo Roy
Restrictions: None

Activities: Lecture

This course covers a broad range of topics in the development and operation of medical diagnostics, devices, and therapeutics and combines lectures, readings, case studies, and class discussion. It will feature regular UCSF faculty as well as industry professionals.

School: Graduate Division
Department: Translational Medicine Program

May the student choose the instructor for this course? No

Repeat course for credit? No

BIOENGR 280 Clin Aspects of Bioengineering (1 Units) Fall, Winter, Spring

Instructor(s): Hanmin Lee
Prerequisite(s): Consent of instructor.

Restrictions: None

Activities: Lecture

The goal of this course is to give students interested in medical device innovation an introduction to the workings of the health system. Learners will explore the structure of hospital systems and distinguish stakeholders and their roles. By learning how different players put medical technology to use, students will learn to identify gaps and unresolved needs.

May students in the Graduate Division (i.e. pursuing Master or PhD) enroll in this course? Yes
Repeat course for credit? No
BIOENGR 281 Biological Aspects of Bioengineering (1 Units) Fall
Instructor(s): Adam R. Abate
Prerequisite(s): None.
Restrictions: Graduate standing.
Activities: Lecture
The objective of this course is to introduce students to the broad range of bioengineering research that is associated with biological applications. Students will be exposed to problems in cellular and molecular engineering, tissue engineering and modeling neural and complex systems. Each session will involve presentations from invited faculty members of specific areas of research.

Repeat course for credit? No

BIOENGR 283 Designing Clinical Research for Industry (2 Units) Spring
Instructor(s): Shuvo Roy
Prerequisite(s): Graduate standing
Restrictions: Instructor approval required.
Activities: Lecture
Introduces students to the strategies applied to clinical study design for a variety of medical technologies. Main elements of a clinical protocol such as objectives, study design, patient population, sample size and endpoints will be taught in context of company value creation and risk reduction. Students will receive an overview on the regulatory requirements associated with conducting clinical trials for medical technologies. Course will be taught by industry experts.

Repeat course for credit? No

BIOENGR 285 Health Care Finance & Economics (2 Units) Fall
Instructor(s): Joanne E. Spetz
Prerequisite(s): None.
Restrictions: None.
Activities: Lecture, Project, Web work
This course focuses on how current health care financing systems and emerging trends affect strategic technology development and market decisions. This course is designed so students understand the underlying drivers of rising health spending, the policies that might slow it, and the impact of possible policies on future product markets. The course covers the fundamental components of health economics, financial analysis, and strategies to increase health care value.

Repeat course for credit? No

BIOENGR 296 MTM Capstone Project (UCSF) (3 Units) Fall, Winter, Spring
Instructor(s): Shuvo Roy
Prerequisite(s): None
Restrictions: This course is restricted to MTM program students.
Activities: Lecture, Project
The objective of the MTM program is to develop leaders who can synthesize the technical, economic, and social issues involved in the design and operation of complex medical devices, systems, and organizations. Students will develop and demonstrate these skills through the capstone project and course activities. This course combines classroom instruction with outside project work. In addition to lecture, teams meet with outside mentors and develop project.

Repeat course for credit? Yes
BIOENGR 297  Special Study (1-8 Units) Fall, Winter, Spring
Instructor(s): Staff
Prerequisite(s): None
Restrictions: None
Activities: Seminar, Project
Reading and conferences for properly qualified students under the direction of a member of the staff.

School: Graduate Division
Department: Bioengineering Program
May the student choose the instructor for this course? Yes
Does enrollment in this course require instructor approval? No
Course Grading Convention: Letter Grade, P/NP (Pass/Not Pass) or S/U (Satisfactory/Unsatisfactory)

Repeat course for credit? No

BIOENGR 298  Master’s Thesis for Bioengineering (1-8 Units) Fall, Winter, Spring, Summer
Instructor(s): Staff
Prerequisite(s): Advancement to candidacy and permission of the graduate adviser
Restrictions: none
Activities: Project
For graduate students engaged in writing the thesis for the master's degree.

School: Graduate Division
Department: Bioengineering Program
May the student choose the instructor for this course? Yes
Does enrollment in this course require instructor approval? No
Course Grading Convention: P/NP (Pass/Not Pass) or S/U (Satisfactory/Unsatisfactory)
Graduate Division course: Yes
Is this a web-based online course? No
Is this an Interprofessional Education (IPE) course? No
May students in the Graduate Division (i.e. pursuing Master or PhD) enroll in this course? Yes
Repeat course for credit? No

BIOENGR 299  Dissertation (0 Units) Fall, Winter, Spring
Instructor(s): Staff
Prerequisite(s): Advancement to candidacy and permission of the graduate adviser
Restrictions: Course is limited to students who have completed their fieldwork and are in the dissertation writing phase of their degree.
Activities: Independent Study
This course is for students who have finished research and data collection, and are writing their dissertation. It is customized by the instructor for each student(s), depending upon their exact dissertation topic.
